MOHAMED AFFAN H

Chennai, India | +91 9500464771 | hmaaffan@gmail.com | LinkedIn | GitHub

EXECUTIVE SUMMARY

Cybersecurity undergraduate focused on building practical security systems across network security, application security, AI-driven detection, and GRC. Built and evaluated hands-on projects including an anomaly-based IDS, an autonomous multi-agent AppSec platform, and an AI-powered ISO 27001/DPDP compliance auditor. Strong foundation in Python, Linux, networking, application security, machine learning, and security automation, demonstrated through independent projects and 15+ hackathons. Seeking a Cybersecurity, Security Engineering, VAPT, or GRC internship to contribute to real-world security work.

EDUCATION

Chennai Institute of Technology — B.E. Cybersecurity *2025 – 2029*

CGPA: 7.85 | Minor: Innovation & Entrepreneurship (2026 – 2028)

San Academy — CBSE, Grade 12 *2025*

80%

TECHNICAL SKILLS

Security & GRC: Governance, Risk & Compliance (ISO 27001:2022, DPDP Act 2023, SOC 2, NIST SP 800-53) · Networking Fundamentals (TCP/IP, DNS, HTTP, Firewalls) · Linux · Ethical Hacking & Penetration Testing · SAST (Bandit) · OWASP Top 10 · Network Security (IDS/WAF, Scapy) · Zero Trust Architecture

Development: Python · JavaScript/TypeScript (Next.js/React) · FastAPI · Machine Learning (Scikit-learn, XGBoost, SHAP) · LangChain · SQL · Docker · Git/GitHub

PROJECTS

Compliance Intelligence | *AI-Powered ISO 27001 & DPDP Act Auditor (GRC)*

- Built an AI compliance workspace (FastAPI, RAG, Ollama/Claude) that audits policy documents against ISO 27001:2022 (93 controls) and India's DPDP Act 2023 (25 controls), with source-grounded verification tying each verdict to supporting document excerpts.

Network Guardian | *Autonomous AI Intrusion Detection System*

- Built an anomaly-based IDS using Isolation Forest trained on benign traffic, achieving 94.3% ROC-AUC and 71.2% detection on held-out attack samples.
- Added live packet capture with Scapy, a WAF layer for injection/XSS detection, AbuseIPDB threat-intelligence lookups, and SHAP-based explanations for alerts.

DevSecOps AI Swarm Engine | *Autonomous Multi-Agent AppSec Platform*

- Built a 4-agent AppSec workflow (Coder, Tester, Hacker, Patcher) with FastAPI and Python to generate code, run Pytest QA, and perform Bandit-based SAST security checks.
- Automated remediation for CWE-95, CWE-89, and CWE-22 test cases; generated PDF/JSON reports mapped to OWASP Top 10, SOC 2, ISO 27001, and NIST SP 800-53.

ZeroTrustUs | *Zero Trust Security Platform — SuRaksha Cyber Hackathon 2.0, Canara Bank*

- Built a Zero Trust platform combining a LangChain SQL-agent audit backend (local Ollama/Llama 3.2) with a Next.js/TypeScript dashboard to assess database configurations against regulatory baselines offline.

ACHIEVEMENTS

- SuRaksha Cyber Hackathon 2.0 (Canara Bank) — Shortlisted with team for ZeroTrustUs.
- OpenSwarm Hackathon (Polaris School of Technology, Bengaluru) — Built DEGENT, a two-agent AI debate arena.
- InnoGenesis Hackathon (Dr. NVR NRI Institute of Technology, Andhra Pradesh) — Built DevSecOps AI Swarm Engine in 24 hours.
- 15+ national/inter-college hackathons across AI, cybersecurity, and product domains.
- Karate — Black Belt.

CERTIFICATIONS

- Certified Ethical Hacking and Pen-Testing Bootcamp — CappricioSec University (2026)
- Foundations of Cybersecurity — Google (2025)
- Python Essentials 1 — Cisco (2025)
